

Essence Of Warehouse Management

With The Smart And Rugged Qualities Of The Zebra WS50 Device, Conveying Efficiency, Intelligence, And Suitability For Warehouse Operations.

About Project

We have developed a cutting-edge application designed to operate seamlessly on the Zebra WS50 device. With our innovative solution, users gain the ability to effortlessly oversee and manage warehouse operations with unparalleled ease, speed, and effectiveness.

Objective

Our client seeks to develop an application aimed at optimizing the interaction between human workers and robotic systems within their customers' warehouses. By implementing the features outlined in this proposal, the client aims to enhance automation levels and overall productivity within warehouse operations.

Client's Requirement

The project entails the development of a comprehensive application tailored to facilitate seamless workflow interactions between human operators and robotic systems deployed within warehouse environments. The application will streamline communication, task allocation, and data exchange to maximize efficiency and operational output.

Key Challenges

Integration with Robotic Systems

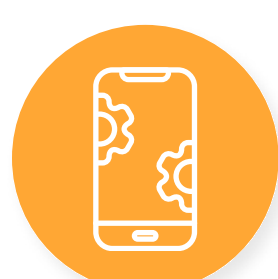

Develop interfaces to seamlessly integrate with various robotic systems and automation equipment deployed within the warehouse, ensuring interoperability and compatibility.

On-premises Server setup without Wifi Use

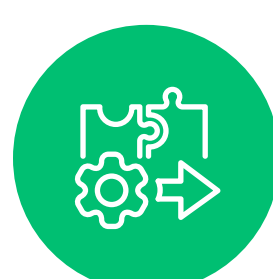

Establish a local server within the warehouse or facility premises. This server will act as the central hub for data storage, processing, and communication with Zebra WS50 devices.

Solution We Provided

3rd party MDM Solution

We have suggested & set up the MDM SOTI solution to manage the application without wifi and manage all Zebra WS50 devices.

Seamless Intergration

We have suggested & set up the MDM SOTI solution to manage the application without wifi and manage all Zebra WS50 devices.

Key Modules Of Solution

Barcode scanning and printing

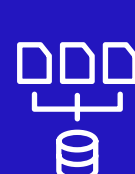

Inventory management

Workforce management

Task Assigning & Tracking

Data Collection and Reporting

The Benefits

- Enhanced automation levels lead to increased operational efficiency and productivity.
- Improved communication and collaboration between human workers and robotic systems.
- Streamlined workflow processes, reduce manual errors and optimize resource utilization.
- Real-time insights and analytics to drive data-driven decision-making and process improvements.
- Seamless integration with existing warehouse infrastructure, minimizing disruption and deployment efforts.
